

# Comparison of top feature sets across UCR/UEA repository univariate problems

Error bars are  $\pm 1$  SD obtained over 30 resamples for 'All features' and top individual set.

Colour indicates  $p < .05$  difference in accuracy for individual feature set(s) over all features.

Pie/point size scales proportionately to the number of individual sets that outperformed 'All features', with points indicating one or none. Pie proportions map to rank with the top performer occupying the largest space.
